

SECTION 1

Arrangements for Service 1-1-1 to 1-1-3

Regional Area Map..... 1-2-1

Regional Center Cities & Townships Served 1-2-2 to 1-2-8

Regional Center Contact Information..... 1-2-9

**ARRANGEMENTS FOR SERVICE
THROUGH THE REGIONAL CENTER**

1. Introduction.

The information in this section is intended to be a general guide to assist persons in contacting The Detroit Edison Company. It is intended to touch on the most common reasons for such contacts and to give brief descriptions of Company requirements. More detail can be found in further sections of this book and in the *Rate Book for Electric Service*. Company personnel should be contacted for proper reference and interpretation of rules and specifications.

2. Area Personnel Assignments.

- (a) **Regional Areas.** The Detroit Edison service territory is divided into four Regions. These Regions include the Northeast, Northwest, Southeast and Southwest territories. For assistance in contacting the proper Regional Center, please refer to Pages 1-2-1 through 1-2-9.
- (b) **Secondary Services.** The Personnel at each Regional Center will answer general questions and refer service requests to a Planner. The Planner's responsibilities include load planning, distribution design, service entrance and meter equipment inspection and ordering Detroit Edison *secondary metered* connections and meter installations.
- (c) **Primary Services.** The Company's Primary Services Group shall approve the design, construction and materials required for a *primary metered* service. Refer all inquiries to 313.235.6471.

3. Preliminary Planning.

- (a) **Service Availability.** Persons considering the purchase or construction of buildings on land beyond the existing electric supply lines should contact the appropriate Regional Center to determine if service can be provided. Do not rely upon guesswork or the representation of other parties. Even when Company lines are located nearby, they may not be suitable for the service requested and time consuming construction may be involved. Service connections and line extensions that require pole setting or conduit installation may require additional time; also, permits may be required from governmental authorities and/or rights of way from adjacent property owners. To avoid unnecessary delays, approximately ninety days notice should be given before service is required.
- (b) **Easements.** Developers should present plans of their projects to the appropriate Regional Center for utility easement recommendations *before* the plans are recorded.

- (c) **Site Plans.** Where a new commercial building or an extensive remodeling of an existing building is planned, customers or their architects should submit construction drawings to the Regional Center as soon as they are available.

4. Relocations.

Whenever the Company is required to make changes to its distribution system of poles, wires, cables or equipment to permit work to be done by contractors, or for the convenience of customers, the cost shall be paid for in advance by the requesting party.

5. Temporary Service.

The Company will furnish temporary service, including a line extension, providing the applicant for such service pays the entire cost of furnishing, installing and removing such temporary service, less salvage value realized. In addition, the customer will pay at published rates for all energy consumed. In some cases, the account may require the establishment of a minimum monthly charge.

6. Reference.

Refer to Section 2 of this book for types of Distribution Systems, Section 3 for Underground Service, Section 4 for Overhead Service and Section 5 for Service Equipment.

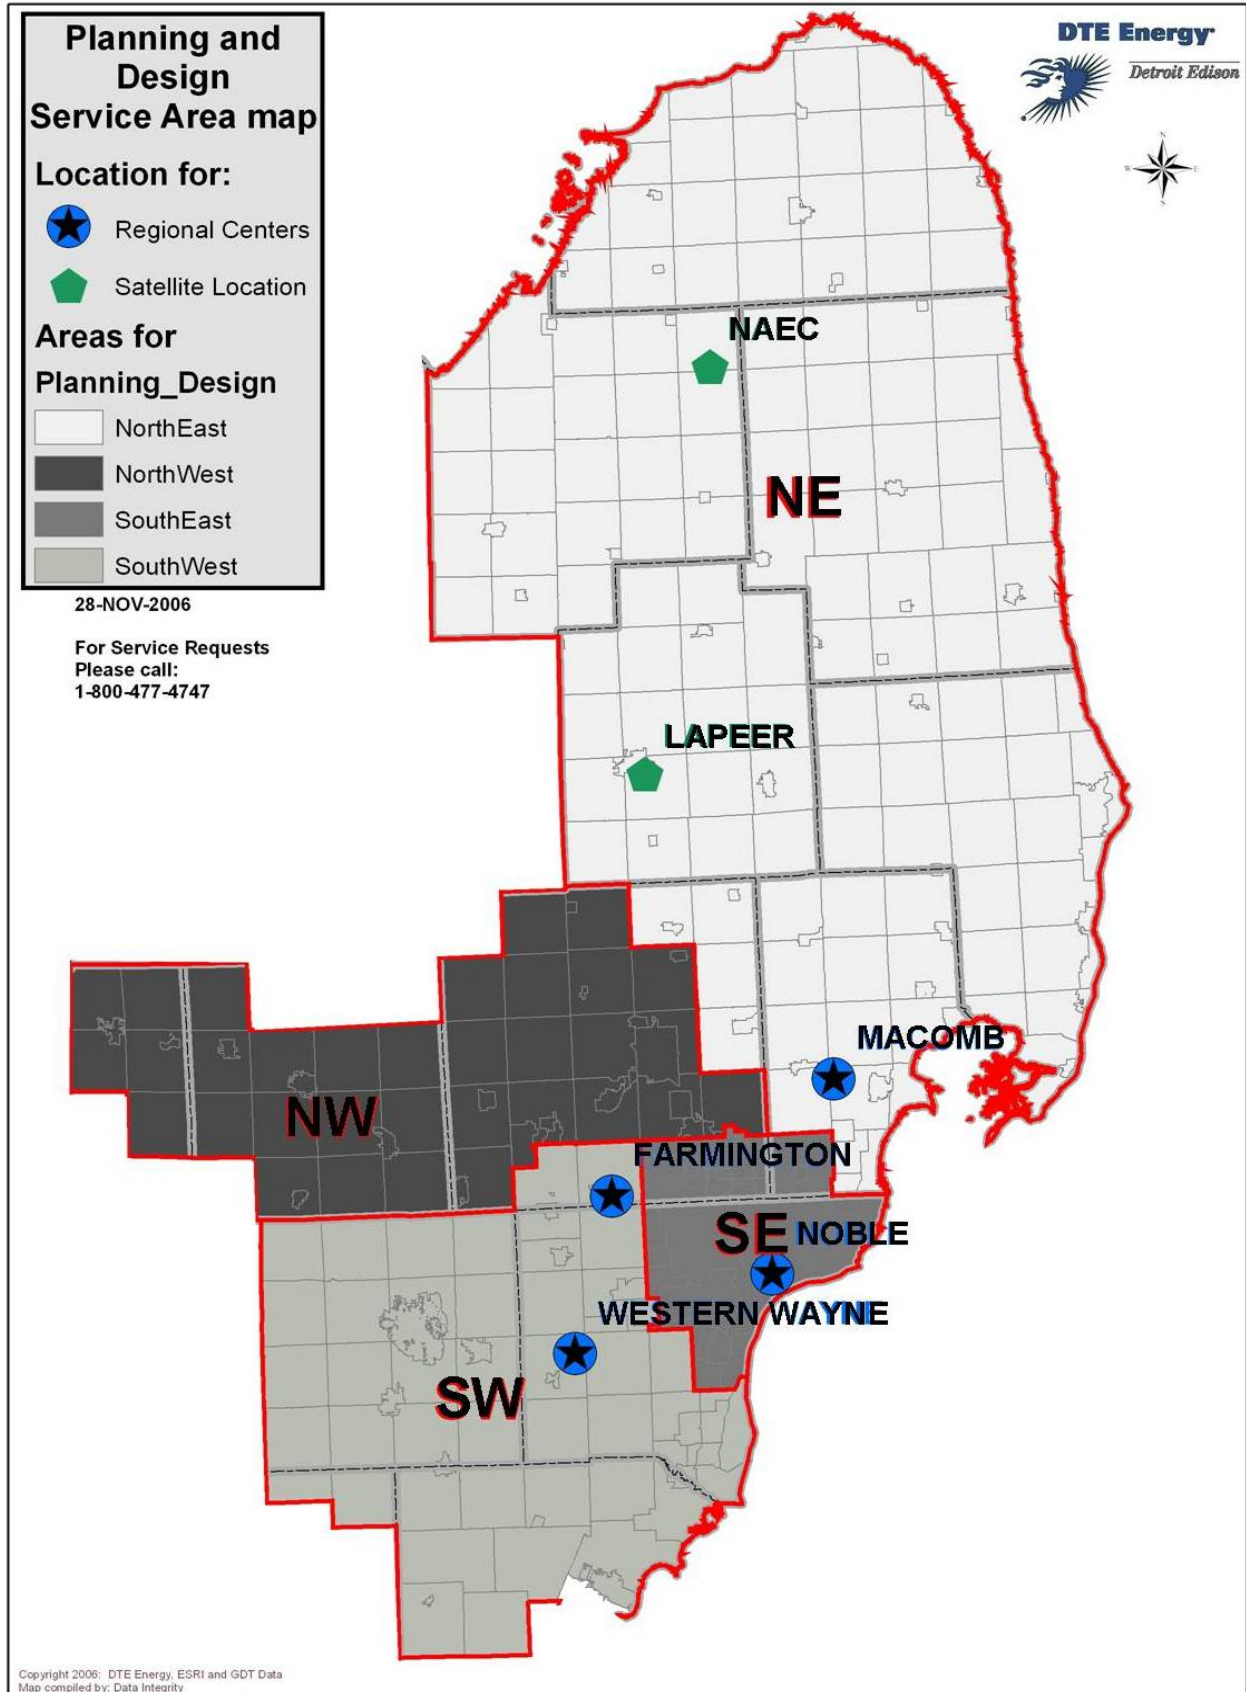

7. Line Extensions.

Refer to the *Rate Book for Electric Service*, Rule C6.1.

8. Service Connections.

- (a) **Point of Service.** All wiring on the customer's premises shall be brought to a suitable service point as specified by the Detroit Edison Planner. If the service is wired without obtaining prior approval and the location is unsuitable because of circuit design or positioning of Company facilities, the customer shall be responsible for rewiring to the point designated by the Detroit Edison Planner.
- (b) **One Service to a Building.** Only one service connection is installed to a building or group of buildings, including adjacent service areas under a single ownership. Exceptions are made where, in the judgment of the Company, additional services are necessary or desirable for operating reasons, load considerations or safety requirements.
- (c) **Service Entrance Equipment.** Before purchasing equipment or installing wiring, the customer should secure from the Company the characteristics of electric service available. Refer to Rule C6 in the *Rate Book for Electric Service*.

- (d) **Applicable Rules.** All wiring on the customer's premises shall be installed and maintained in accordance with applicable laws and the rules of the governmental authority having jurisdiction, the *National Electrical Code* and the rules of the Company. (*Rate Book for Electric Service, C6*).
- (e) **Meter Location.** The customer shall provide, at a location approved by the Company and free of expense to the Company, a suitable place for the meter or meters and any other supply, protective or control equipment of the Company that may be required for delivery of service. (*Rate Book for Electric Service, Rule C6*.)
