

Energy Efficiency Program for Business

Retro-Commissioning

Restoring operational efficiency, cost-effectively

Is your building out of sync? The costs can add up.

Most buildings waste as much as 20-30% of their energy use* due to inefficiencies like miscalibrated sensors or outdated schedules. This can add up to major costs. The DTE Energy Retro-Commissioning Offering (RCx) is designed to identify cost-effective ways to tune up your existing equipment for more efficient performance. The RCx team can also help you improve occupant comfort and boost productivity.

RCx benefits

- **Fast payback:** Most projects pay back within two years.
- **No disruption:** Improvements are made without interrupting regular activities.
- **Data-driven:** Verified savings with clear reporting dashboards.
- **Future-ready:** Supports Energy Sustainability Goals disclosure and carbon reduction targets.

Get your energy assessment

To help your building operate at peak efficiency, DTE's RCx team will conduct an energy assessment to identify energy-saving improvements of mechanical and electrical systems. These improvements may include:

- Optimizing scheduling to ensure equipment and lighting is operating only when needed.
- Fixing outside air dampers that are not operating properly.
- Adjusting supply air temperature and fan speed controls.
- Adjusting ventilation in over-ventilated areas.
- Adjusting supply air static pressure setpoint.
- Aligning zone temperature setpoints to match building occupancy patterns.
- Optimizing chiller and boiler operations to match building load condition.
- Other optimization measures based on your building's unique specifications.

Retro-Commissioning

What is the process?

1. **Application:** The RCx team will work with you to pre-qualify your project and identify potential savings opportunities. We will then help you fill out and submit your application for applicable rebates and/or bonus rebates.
2. **Assessment:** The RCx team will perform a detailed assessment of your building. Then we'll summarize the results in a report listing low-cost energy-efficiency improvements to consider, along with the estimated payback period.
3. **Implementation:** Upon completion of improvements, we will confirm the energy savings and present a final report verifying the completion of retro-commissioning improvements and estimated energy savings.

What is the rebate?

You can qualify for two types of rebates: \$0.05/kWh for electric and \$0.30/therm for gas.*

Who is a good fit for this offering?

Commercial DTE customers looking to save energy, reduce operating costs and improve building performance are the best fit for this offering. Selection criteria include:

- Any automation system with the capability to schedule units on/off, make adjustments, and if possible, adjust operational parameters from an operator interface.
- Annual electric energy consumption of 1,000,000 kWh or greater.
- Ability to provide remote access to the BMS/BAS.
- Have a relationship with a controls contract to quickly implement the recommendations.

Get started today!

To apply or to get more information on the RCx offering, visit dteenergy.com/RCX, send an email to saveenergy@dteenergy.com, or call 855.748.2525.

*Savings and rebates may vary. See program catalog for eligibility. Program funding is limited and subject to change.
