

Less leaks, more savings

Every compressed air system has leaks that can negatively affect system capacity and production, using unnecessary energy and shortening the lifespan of your equipment. Participating in the **DTE Energy Find & Fix® Compressed Air Program** is easy, convenient, and saves you money and energy.

Step 1: Find

The first step in the program is a **free** compressed air leak survey, conducted by a program participating contractor. Technicians will survey your system using an ultrasonic detector and tag any leaks.

Step 2: Fix

Any discovered leaks can be fixed by you, or by a contractor. Once the leaks have been fixed, we will help you complete and submit the program application to receive your incentives. You can receive \$35/SCFM fixed if you have VSD, or \$20/SCFM fixed if you don't have VSD. Fix incentives can also be paid directly to a participating contractor, so there are no out of pocket costs!

Benefits

- Reduced unplanned downtime and increased equipment lifespan
- Reduced operating costs
- Reduction of unnecessary demand on your compressed air system
- Access to a vetted network of compressed air specialists
- Access to advanced leak detection tools and methods

Eligibility

- You must be a commercial DTE electric customer in good standing
- You use less than 25,000,000 kWh annually
- The facility has an operating compressed air system with minimum 75 horsepower. This does not include back up compressors.
- You fix at least 50% of the identified leak volume within 60 days of the completed leak survey
